SUMMARY

Full-Stack Developer with experience building e-commerce platforms, client-facing web applications, admin dashboards, and data-backed product features using React, Next.js, TypeScript, Node.js, Express.js, MongoDB, PostgreSQL, Prisma ORM, and C#. Skilled in reusable UI components, Figma-to-code implementation, REST APIs, monorepo workflows, microservice-oriented architecture, Cloudflare deployment, and end-to-end debugging.

TECHNICAL SKILLS

Frontend: React, Next.js, TypeScript, JavaScript, HTML, CSS, responsive UI, reusable components, Figma-to-code

Backend & Architecture: Node.js, Express.js, REST APIs, Python, Django, C#, microservices, monorepo workflows, Git/GitHub

Databases & Cloud: MongoDB, PostgreSQL, Prisma ORM, SQL, schema design, Cloudflare, AWS/GCP/Azure fundamentals

AI / Data: OpenAI API, RAG, embeddings, Pandas, NumPy, scikit-learn, Tableau, Power BI

EXPERIENCE

Full-Stack Developer, Blackeven Ventures

Oct 2022 - Dec 2023

- Built a multi-tenant e-commerce website builder that enabled clients to launch branded storefronts, list products, and reuse page sections from a shared component system.
- Developed Next.js storefront pages and reusable React components including product listings, hero banners, headers, footers, and layout sections to accelerate client site creation.
- Worked within a monorepo and microservice-oriented architecture, organizing shared UI packages, service integrations, and client-specific storefront code for maintainability.
- Integrated frontend pages with backend product/catalog data flows, supporting dynamic rendering of product information, content sections, and storefront-specific configuration.
- Supported Cloudflare-based deployments for front-facing e-commerce sites, helping publish performant client websites and streamline development-to-production handoff.
- Collaborated with design and product stakeholders to turn custom storefront requirements into configurable components, improving consistency across sites while preserving client branding.

Software Developer, Unibox Technologies

Jan 2022 - Sep 2022

- Built React and Node.js based internal dashboards for managing client records, workflow statuses, and data-backed reporting views.
- Created Express.js API routes and backend validation logic to support create, update, search, and display workflows across frontend screens.
- Converted Figma designs into reusable React components, form layouts, filters, and responsive pages for client-facing application features.
- Debugged API responses, state updates, and database-backed records, improving consistency between UI actions, backend results, and user-facing reports.
- Modeled simple MongoDB collections for client records, workflow items, and report data, keeping schemas easy to explain and maintain.

Web Developer, Catiena Technologies

Jul 2021 - Dec 2021

- Built a React and Node.js client onboarding portal for tracking customer details, project requests, task status, and internal follow-ups in one dashboard.
- Converted Figma designs into reusable UI components including dashboard cards, client forms, status badges, filters, and responsive list/detail pages.
- Implemented CRUD workflows with REST APIs for creating client records, updating project details, searching entries, filtering by status, and displaying saved activity.
- Added basic C# utility and validation logic for internal data checks while debugging UI state, API responses, and database-backed records across the stack.
- Tested login-protected user flows, form validation, and dashboard interactions with senior developers, documenting fixes and keeping behavior aligned with requirements.

SELECTED PROJECTS

Seminar Sidekick

2026

- Built a Next.js academic paper assistant using OpenAI API, PostgreSQL, Prisma ORM, and RAG workflows to support source-grounded Q&A over uploaded PDFs.
- Designed backend models for document chunks, metadata, retrieval results, and citation-backed responses while keeping the system easy to extend.
- Implemented PDF parsing, chunking, hybrid retrieval, embedding persistence, and fallback extractive QA to keep responses reliable without overloading query time.

QueueWise

2025

- Built a React operations dashboard with modules for queue tracking, calendar planning, notifications, task details, insights, and weekly review.
- Created reusable cards, filters, status views, navigation patterns, and task-detail screens to organize priorities and upcoming administrative work.
- Centralized mock integrations and workflow data into one dashboard for reviewing queues, priorities, upcoming work, and weekly activity patterns.

Interpretable ML for Clinical Risk Prediction (GAM / GA2M)

2025

- Built Python workflows to explain clinical risk predictions with GAM/GA2M models, handling missing values, comparing distributions, and evaluating model behavior.
- Developed preprocessing and evaluation steps with Pandas and interpretable ML techniques; visualized feature-level effects for reproducible academic reporting.

EDUCATION

Rutgers, The State University of New Jersey

Jan 2024 - May 2026

M.S. in Computer Science | GPA: 3.87/4

Fr. Conceicao Rodrigues Institute of Technology, University of Mumbai

Jul 2019 - May 2023

B.E. in Information Technology Engineering | CGPA: 8.4/10
